Step 1: Get the permalink from the database

Many of the articles in the LRC’s collections come from EBSCOhost databases. The image below shows how to access the permalink in an EBSCOhost database. See Finding the Correct URL when accessing other databases.

To access the permalink, click the chainlink symbol on the right hand side of the interface. The permalink then appears above the article. Copy the permalink.

Step 2: Select “Create a link” in your eConestoga Content area

Under “New” choose “Create a Link.” Note: At this time, choosing “Create a File” and then embedding the URL in the text window will not allow the URL to function correctly.

Step 3: Add a URL using the permalink

Include a title or reference to your resource, as well as the permalink to the resource. Ensure you select “Open in New Window.”

Step 4: Create the link

Next, click the Create button.

Step 5: add a full reference, or other explanatory notes

a. Click “Add a Description.”

b. Insert notes.

Done!
